WHAT IS eMAM?

eMAM™ is a media asset management platform that gives users powerful tools to find and use lightweight proxy or native resolution media from any number of local or cloud storage and archive systems. With scores of integrations, it provides complete integrated media workflows locally or in the cloud. eMAM can scale from a small system to one designed to meet the needs of the largest organizations.

FEATURES

Organize

Group your assets into multi-level projects and categories to classify and control access.

Storage & Archive Management

Manage content in multiple locations, on premise and cloud, with multiple storage integrations available.

Search

Find the right clip, every time. Save time searching with metadata control, tags, and advanced search filters.

Collaboration

Technical/non-technical users can comment, mark, subclip, or review/approve immediately with the team.

Distribute or Deliver

Deliver media to a predefined location (locally/cloud) and securely share media to social media/externally.

Edit

Connect eMAM to Adobe applications or Final Cut Pro to bring these features to an extension panel within the NLE.
